

Input for Kanishk 30 May 2026

TCE Demo Readiness: Full Input for Kanishk *Prepared by Antoine Jansen / Humanising AI*

CRITICAL FIXES (before any demo)

1. Operator identity: Replace Nadia Kwan with Antoine Jansen (Managing Partner, Humanising AI) across all touchpoints: Digital Twin, OrgTwin header, PDF export Lead Consultant field, bottom-left profile.
2. Confidence score variation: All 10 specialists show identical 93%. This immediately reads as templated. Introduce variation (87%-96% range) per specialist.
3. Numbered list rendering bug: Legal Advisor analysis shows all steps as "1." Fix ordered list rendering in persona analysis output.
4. Browser hygiene: URL bar exposed an unrelated domain during session. Demo must run in fullscreen or dedicated browser profile with no external tabs visible.
5. Observer Audit and Auto-recommend Execution Mode: Both toggled off. Set both to ON as system default.

STRONG ENHANCEMENTS (high impact on demo persuasion)

6. Persona assembly UX: Restore the earlier interaction model: engagement input triggers proactive Seneca team suggestion, plus manual filtering across the full persona library, drag-and-drop into stages, per-persona role assignment (Contributor/Lead/Challenger/Synthesizer/Observer), then execute as a coordinated specialist team. This is the single highest-impact demo moment currently missing.
7. Daily Credit Consumption chart: Currently empty on dashboard. Populate with representative historical data.
8. Engagements and Insights modules: Currently greyed out. Please clarify roadmap and if possible unlock for demo navigation, even in read-only state.

DEMO CLIENT CONFIGURATION

9. Replace "Meridian Advisory Group" with "Ministerie van Justitie en Veiligheid" (<https://www.rijksoverheid.nl/ministeries/ministerie-van-justitie-en-veiligheid>) as the default demo OrgTwin. This is a recognisable Dutch public sector organisation that resonates strongly with enterprise and government prospects.

NEW FEATURE REQUEST: Post-Execution ROI Reveal Screen

After pressing Execute and the synthesised output is revealed, automatically display a full-screen ROI Summary screen before the user navigates to individual persona analyses.

Execution animation: Progress bar runs from 0 to 100% with elapsed time counter visible. Each specialist card lights up sequentially as it completes. Final state shows all specialists Done, then auto-transitions to the ROI screen.

ROI screen logic: For each specialist, display a side-by-side comparison:

Specialist	Human Equivalent	Human Cost	TCE Cost	Saving
Compliance Sentinel	2 days x EUR 250/hr x 8hrs	EUR 4,000	EUR 0.60	EUR 3,999.40
Legal Advisor	2 days x EUR 250/hr x 8hrs	EUR 4,000	EUR 0.60	EUR 3,999.40
(all specialists)	...	...	...	...
Total				EUR XX,XXX saved

Configurable parameters:

- Hourly rate (default EUR 250)
- Days per specialist (default 2)
- TCE cost per minute (default EUR 0.30)
- Actual elapsed time pulled live from session timer

Why this works: The prospect sees a live saving calculation specific to their own session, their own team, their own numbers. That is the moment the conversation shifts from product interest to procurement intent.
